

Analysis of NEET (Phase-II) -2016

Over all NEET-2 paper was on lines of AIPMT (NEET-1) which was conducted in May this year. Children who would have studied and prepared well for NEET-2 using NCERT and would have taken help of noted reference books for AIPMT (NEET-1), would have only fared well. Subject wise feedback is given below:

PHYSICS

Physics NEET (Phase-II) is calculative. Concepts are tough and calculations are lengthy. 22 questions from class XI and 23 from class XII. Question paper is at tough side. All concepts are not from NCERT level.

CHEMISTRY

The questions of Chemistry in NEET (Phase-II) is more standard than the NEET-I (2016). Some questions are out of the syllabus and beyond the scope of the NCERT books. Numerals are formula based and easy. One question has two options correct (Code-AA, Q.67). Entire syllabus was not covered and it missed some of chapter like Chemistry in Everyday Life, Environmental Chemistry etc.

BIOLOGY

In biology, the paper was of standard type. It covered the class XI and class XII in a balanced manner. All the important chapter were covered. The questions were mix of simple; average type and also, the difficult type. Some of the questions were beyond the NCERT (restriction endonuclease making blunt ends cut). It must have been perceived well among the student who had prepared well for it.
