Read the following passage carefully and answer the questions based on it. Choose the most appropriate option.

The capitalist system of society does not foster healthy relations among human beings. A few people own all the means of production and others - though nominally few have to sell their labour under conditions imposed upon them. The emphasis of capitalism being on the supreme importance of material wealth the intensity of its appeal is to the acquisitive intensity. It promotes worship of economic power with little regard to the means employed for its acquisition and the end that it serves. By its exploitation of human beings to the limits of endurance its concentration is on the largest profit rather than maximum production. Thus the division of human family is done on the basis of economic circumstance. All this is injurious to division of human dignity. And when the harrowed poor turn to the founders of religion for succour, they rather offer a subtle defence for the established order. They promise future happiness for their present suffering and

conjure up visions of paradise to redress the balance to soothe the suffering and the revolt of the tortured men. The system imposes injustice, the religion justifies it.

Read the following passage carefully and answer the questions based on it. Choose the most appropriate option:

It is becoming very dangerous to sit in the sun. If you have a fashionable suntan, it doesn't necessarily mean that you have lost of outdoor activities but it does mean that you are in greater danger of getting skin cancer and cataracts. The ozone layer, which protects us from the sun's dangerous ultraviolet rays, is progressively deteriorating. In February 1992, a scientific report said that people in Canada, Northern Europe and Russia were in serious danger. In 1985, the news of destruction of the ozone layer in the South Pole alarmed people in the Southern Hemisphere. In Australia, there are now three times more cases of skin cancer than in the past. In New Zealand, teachers tell school children to wear hats and not to sit in the sun. What causes the destruction of the ozone layer ? Mostly chlorofluorocarbons (CFCs), aerosol sprays, refrigerators, air conditioners, as well as industrial chemicals, send chlorofluorocarbons into the atmosphere, Governments are now trying very hard to forbid CFCs, but it will be expensive and difficult to do so. After the first ozone alarm in the Southern Hemisphere, ecologists all over the world asked governments to take strict measures immediately. Some governments did, but not soon enough. Other countries believe that they have other problems which are more important. Now stricter measures are going to be taken, but already a lot of damage has been done.

Answer (3)

Sol. Magnetic field at the centre of a coil of one turn is

$$B = \frac{\mu_0 I}{2R}$$

If the coil is bent into n -turns, then $B' = \frac{\mu_0 n I}{2r}$

Now,

Length of the wire, $L = 2\pi R$

When it is bent to n -turns, then $L = 2\pi r \times n$

$$2\pi R = 2\pi r \times n \quad \Rightarrow \quad r = \frac{R}{n}$$

$$\therefore B' = \frac{\mu_0 n^2 I}{2R} = n^2 \left(\frac{\mu_0 I}{2R} \right) = n^2 B$$

136. If ' p ' and ' q ' are distance of object and image from principal focus of a concave mirror then what is the relation between ' p ', ' q ' and ' f ' ?

(3) $pq = f^2$ (4) $pq = \frac{1}{f}$

Answer (3)

Sol.

$$u = -(p + f)$$

$$v = -(q + f)$$

Applying mirror formula, we get

$$\frac{1}{f} = -\frac{1}{(q+f)} + \frac{1}{-(p+f)}$$

$$\frac{1}{f} = \frac{1}{q+f} + \frac{1}{p+f}$$

$$\frac{1}{f} = \frac{p+f+q+f}{(q+f)(p+f)}$$

$$\Rightarrow pq + (p+q)f + f^2 = (p+q)f + 2f^2$$

$$pq = f^2$$

(3) $\frac{u_1 + u_2}{2}$
(4) $u_1 + u_2$

Answer (3)

Sol. When real image is formed, object distance = $-u_1$

Let focal length = f

$$m = -\frac{f}{f - u_1}$$

When the image is virtual, object distance = $-u_2$

$$m = \frac{f}{f - u_2}$$

Now,

$$-\frac{f}{f - u_1} = \frac{f}{f - u_2}$$

$$\Rightarrow -f + u_2 = f - u_1 \quad \Rightarrow f = \frac{u_1 + u_2}{2}$$

$$a_n \leq 999$$

$$a + (n-1)d \leq 999$$

Sol. $S_m = n$

$$\frac{m}{2}(2a + (m-1)d) = n$$

$$= 2am + (m^2 - m)d = 2n \quad \dots(1)$$

Similarly

$$2an + (n^2 - n)d = 2m \quad \dots(2)$$

$$(1) - (2)$$

$$\Rightarrow 2a(m-n) + (m^2 - m - n^2 + n)d = -2(m-n)$$

$$\Rightarrow 2a(m-n) + (m-n)(m-n) - (m-n)d = 2(m-n)$$

$$\Rightarrow 2a(m-n) + (m-n)(m+n-1)d = -2(m-n)$$

$$2a + (m+n-1)d = -2$$

$$S_{m+n} = \frac{m+n}{2} [2a + (m+n-1)d]$$

common roots is given by

$$(x^2 + 6x + 2d) - (x^2 + 5x + d) = 0$$

$$x + d = 0$$

$$x = -d$$

putting $x = -d$ in eq. (1)

$$d^2 - 5d + d = 0$$

$$d^2 - 4d = 0$$

$$d(d - 4) = 0$$

$$d = 0, d = 4$$

putting $x = -d$ in eq. (2)

$$d^2 - 6d + 2d = 0$$

$$d^2 - 4d = 0$$

$$26 + x = 35$$

$$x = 35 - 26$$

$$x = 9$$

200. ABC is a right angled triangle, right angled at B. If D and E are points on side AB such that AD = DE = EB, then the value of $\frac{AC^2 - EC^2}{DC^2 - BC^2}$ is :

= EB, then the value of $\frac{AC^2 - EC^2}{DC^2 - BC^2}$ is :

- (1) $\frac{3}{1}$ (2) $\frac{5}{2}$
 (3) $\frac{9}{4}$ (4) $\frac{2}{1}$

Answer (4)

$$AC^2 = AB^2 + BC^2$$

$$= (3x)^2 + BC^2$$

$$AC^2 = 9x^2 + BC^2 \text{ ——— (1)}$$

$$DC^2 = 4x^2 + BC^2$$

$$DC^2 - BC^2 = 4x^2 \text{ ——— (2)}$$

$$EC^2 = x^2 + BC^2 \text{ ——— (3)}$$

$$\therefore AC^2 - EC^2 = 8x^2 \text{ ——— (4)}$$

\therefore by (4) \div (2)

$$\frac{AC^2 - EC^2}{DC^2 - BC^2} = \frac{8x^2}{4x^2} = \frac{2}{1}$$
